

Data Center Cage Systems

Cage systems are the perfect solution for data center environments requiring subdivision or a higher level of security. This concept is a true space-saving way to implement both enhanced security without compromising access for individual, multiple, or enterprise-wide security. Since the system is modular and highly configurable, you can add to it, redo it, or scale it to your needs with minimum hassle. A strong, durable, and attractive cage by Emcor will impress potential clients by showing your attention to quality and security.

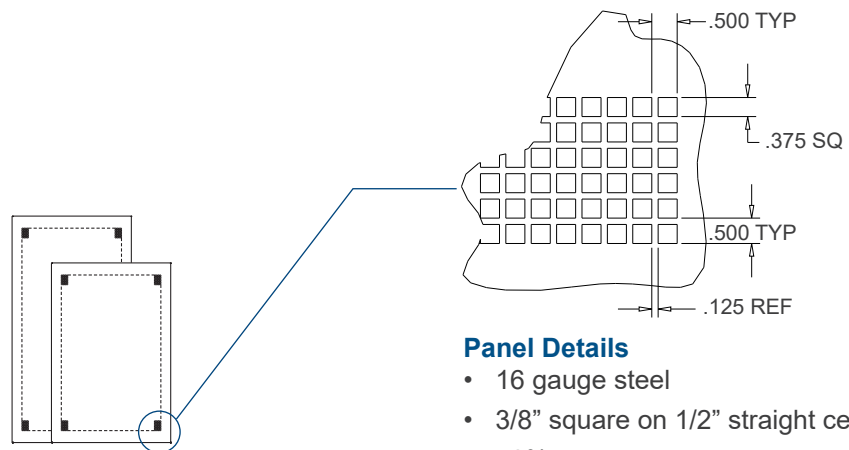

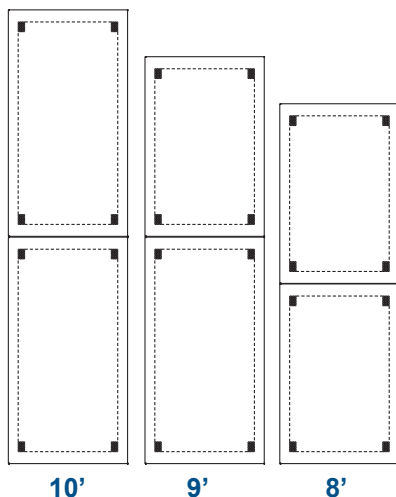

PEACE OF MIND FOR YOUR CUSTOMERS

- Secure
- Durable
- Modular
- Easy to install
- Reconfigurable

Mix and Match Standard Panel sizes

Standard heights include eight, nine and ten foot options. Linear widths and depths fit perimeter around computer floor tiles. Standard doors are sliding (barn door style) with a mechanical keylock. Additional locking options can be specified. The cage is finished in a durable powder paint. Select from nine color options. Installation services are available.

Panel Details

- 16 gauge steel
- 3/8" square on 1/2" straight centers
- 56% open area

An Additional Layer of Physical Security

Cage systems are comprised of corner posts, center posts, panels, and doors. They are built to the durable standards of our cabinets and enclosures. The rugged steel construction ensures structural integrity. The cage can be secured to the walls, ceiling, or floor. Once installed, the hardware is not accessible from the exterior.

Works with Existing Infrastructure

The open, but secure, design allows free circulation of air, cooling systems, light and fire suppression systems throughout the secured area. This system is easy to reconfigure as needs change or when adding additional servers. In addition, it does not require level floors and precise alignment like some hook and slot mounting systems.

Flexible Design and Easy Installation

Cage systems utilize standard panels to accomplish nearly any layout. The panels easily bolt together and are shipped already sized, no cutting or grinding is required. This eliminates the worry about debris infiltrating the air during server cage installation in an operating facility. All necessary hardware is included with your order.

Options, Add On's, and Modifications

- Multiple gauge Panel options - 14, 11, 10
- French door, or custom door options available
- Outdoor options utilizing e-coat, a corrosion resistant finish similar to what is used on cars
- Solid panels or different perforation size options
- Can accommodate any lock of your choice
- Custom colors to match RAL paint chips
- Extensions to existing cages
- Ceiling panels available
