## ZERO KNOWS... SOLUTIONS!

In practice, ZERO Manufacturing produces quality, deep-drawn and fabricated aluminum and molded plastic cases, enclosures and assemblies metal and plastic cases, containers and enclosures. But in truth, our products are protection solutions—ensuring the safe transport and viability of valuable equipment and electronics, without compromise.

Whether we meet your needs with one of our 3,000+ standard products and over 32,000 tools, or the infinite possibilities through a specialized custom design, ZERO has the engineering expertise and manufacturing experience to provide the perfect solution for your protection needs.

Please review our website for current specifications, alloys, materials and information on Deep Drawn.

**ZERO MANUFACTURING, INC.** | 500 West 200 North, North Salt Lake, Utah 84054 USA

Toll Free US 800-500-ZERO (9376) | Direct 801-298-5900 | Fax 801-292-9450 | Email [sales@zerocases.com](mailto:sales@zerocases.com) | Web [www.zerocases.com](http://www.zerocases.com)

TO LEARN MORE ABOUT ZERO CASES VISIT [WWW.ZEROCASES.COM](http://WWW.ZEROCASES.COM)

**Zero** is the leading manufacturer of quality, deep-drawn aluminum and plastic cases and enclosures. We offer over 32,000 pre-tooled sizes and can develop any custom design according to your specifications. Zero is the only case manufacturer to offer full in-house modification services - eliminating the need for multiple vendors when fulfilling alteration, assembly, accessory and cosmetic requirements.

Deep draw is the process of gripping a sheet of aluminum (or brass, copper, cold rolled steel or mu metal) between a pressure pad and a draw ring. Hundreds of tons of pressure is then exerted onto the metal by a computer-controlled press to draw the aluminum or other metal over a punch die. The entire process can include a series of consecutive presses to create the desired shape without distorting the metal. The result? Durable, seamless, draft-free, dust-free and waterproof enclosures designed to protect what's inside.

#### **Why work with Zero?**

- No tooling or set up cost on stock sizes
- No tooling cost on 32,000 pre-tooled products
- Free trimming to height specification
- Low tooling cost for custom jobs
- In-house modification services (to adapt a standard box to special requirements)
- 5 axis laser capabilities for precision modifications and prototyping.

# THE ZERO PROCESS

It all starts with a single sheet of metal. Zero uses only the highest quality aerospace aluminum alloys. Each piece is precision sheared and formed using the Zero method of deep drawing, then tempered to specification.

## **Equipment and Capabilities**

### *Facility Size:*

286,000 square feet

### *Certification:*

ISO 9001:2008/AS9100C

### *Presses:*

45 (up to 440 ton CNC controlled)

### *Tooled sizes:*

32,000 sizes

### *Maximum draw depth:*

18"

### *Maximum draw width/length:*

60" x 98"

### *Processes:*

Washer system, etch, chem film

### *Sheet metal fabrications:*

Press brakes (up to 130 tons); metal fabricator (58 stations); 544 punch presses; extrusion forming; shears (up to 12" wide and 10 gauge capacity); Trumpf 5-axis Laser (eliminates the need for tooling – great for design and small production runs).

### *Weld:*

Resistance and fusion welding.

### *Assembly:*

Hopper-fed riveters; presses for threaded insert and stud installation.

### *Paint:*

Overhead conveyor (540'); five paint booths (for virtually all wet and dry paints); 60' drying oven; two batch ovens; off-line paint booths.

### *Tool and die:*

9,600 square feet; 40 pieces of primary equipment; foundry; CNC milling machines; coordinate measuring machine and profile projector.

## **Summary of Certifications**

ISO 9001:2008/AS9100C  
Welding IAW MIL-STD-2219, Class B&C. (Class A by contract only) and certified to MIL-STD-1595);  
MIL-H-6088G (Heat Treat Aluminum);  
MIL-I-45205A (Inspection System);  
MIL-STD-45662A (Standards traceable to NIST) (Calibration System);  
Based on MIL-STD-105E/ANSI/ASQC

Z1-4-1993 105E level II (Sample Plan);  
MIL-C-5541E Class 1A & 3 (Chem Film);  
MIL-P-85582D C1 or C2 (Prime);  
MIL-STD-171D (Paint); DOD-P-15328 (Wash Prime).  
MIL-PRF-28800

# EXCEPTIONAL FEATURES OF DEEP DRAWN ALUMINUM PRODUCTS BY ZERO MANUFACTURING, INC.

## **High Strength-to-Weight Ratio**

Aluminum alloys are known for their strength and light weight, especially when heat-treated to T6 condition.

## **Extraordinary Resistance to Corrosion**

Aluminum is highly resistant to nearly all substances that cause corrosion and weathering.

## **Endurance Against Stress, Tearing and Cracking**

Aluminum offers a much better fracture toughness than most other materials used in enclosures, including resistance to breakage and fractures.

## **Sustaining Cold Temperatures**

Instead of becoming more fragile and brittle in cold weather, the tensile strength of aluminum actually increases, without loss of ductility.

## **RFI/EMI Shielding and ESD/Grounding**

Aluminum has the highest electrical conductivity-to-weight ratio of any metal, making it excellent for RFI/EMI shielding and for ESD/grounding systems. Aluminum is also an efficient reflector for externally generated interference, including the electromagnetic wavelengths of radio and radar.

## **Heat Dissipation/Shielding**

Aluminum is widely used in "heat sinks" and heat exchangers because of its high thermal conductivity. In an enclosure, it can efficiently transport heat away from electronics and other equipment. It also has high reflectance to encroaching radiated heat, such as sunlight. (Aluminum has a light reflectivity of over 80%.) Also, the low coefficient of aluminum's thermal expansion allows it to sustain higher temperatures without distortion.

## **Special Environments**

Aluminum is non-toxic, odorless, tasteless, non-absorbing, non-sparking, non-magnetic and resistant to fire. It can therefore be used in a wide variety of special environments, including sanitary or clean rooms, food service areas and certain volatile situations. Aluminum also meets more traditional protective requirements such as to be watertight, splash proof, drip proof and resistant to salt exposure.

## **Modifications**

Zero Manufacturing provides in-house customization and modification of all our aluminum products. We offer extensive alteration, assembly, accessorizing, finish, marking and testing services. This means that Zero is your one-stop shop for all casing and enclosure needs. Please see pages 51-52 for more information.

# STANDARD CANS AND BOXES

**Zero Manufacturing** is the premier source for deep-drawn rectangular, square, round and octagonal cases and enclosures. Though we most often recommend aluminum as a durable and protective medium, we also provide deep-drawn products in brass, copper, cold rolled steel and mu metal (in select sizes). Covers are available for most of the items in this catalog.

W x L	Covers	Trim Height	Nutplates	Alloy	Heat Treat *
Standard Part Number Provided.	<p>Five options as specified on page 38.</p> <p><b>CF</b> - Flush fitting cover  <b>CI</b> - Inside fitting cover  <b>COG</b> - Outside gasket fitting cover (gasket not included)  <b>COL</b> - Outside fitting cover with loose fit  <b>COT</b> - Outside fitting cover with tight fit</p>	<p>Minimum and maximum allowable are listed in inches.</p>	<p>Nine patterns are standard (see page 49).</p> <p>Additional configurations are available as a custom item.</p>	<p>The standard alloy used in drawing a particular size is given. However, the alloy can be changed.</p> <p>Alloy options:  AL11=1100-0  AL30=3003-0  AL60=6061-0</p>	<p>Only alloy 6061-0 can be heat treated. When heat treatment is needed, no alloy need to be specified.</p> <p>However, hardness needs to be specified.  Options:  T4  T6  T = Temper</p>

**\*Only 6061 can be heat-treated T4 - T6**

# GENERAL INFORMATION

## Standards

Every box and cover listed are standard items. In ordering, all that is necessary is the Zero Manufacturing part number, your required trim height and the quantity. There is never a tooling charge on a standard Zero Manufacturing box.

## Be sure to include trim heights

Any standard box or CF cover is available, without tooling charges, in any increment of height between the maximum and minimum dimensions shown. If closer tolerance than standard is required contact the Zero Manufacturing sales department.

## Prices

Prices for all standard parts and for many secondary operations can be quoted by phone.

## Delivery

Call for delivery, including next day shipping.

## Specials

## Alloys

Alloys other than those listed as standard may be ordered by adding one of the following suffixes to the part number:

- AL11 = 1100-0 Soft
- AL60 = 6061-0 Hard
- AL30 = 3003-0 Medium

**Example:** Z48-48A-3.00-T6 or H0180184-AL60 changes the material of this part number from 1100-0 aluminum to 6061-0 aluminum.

There is no tooling charge when you utilize standard dies.

## Materials and specifications

Every standard box and cover listed in this catalog may, on request, be delivered to you with certification of its alloy and related materials specifications. Zero Manufacturing maintains a strict program of materials inspection and quality control, beginning with receipt of raw stock through final production and shipping.

## Material

Aluminum Association alloys and gauge designations are used throughout this catalog. Alloys shown below are listed with Aluminum Association and Government Designations.

Aluminum Association	Federal Spec.
1100-0	QQ-A-250/1
3003-0	QQ-A-250/2
6061-0	QQ-A-250/11
3003-H14	QQ-A-250/2

## Material thickness

Thickness shown is the nominal dimension of the blank before drawing. Actual wall thickness of an average box is normally 75% or more of the nominal blank thickness. **This is dependent on depth of draw, number of draws and net blank thickness (a variable within mill tolerances).**

## Alternate alloys and heat treating

Most boxes and covers can be drawn on stock tooling using any drawable aluminum alloy. When 6061-0 alloy is drawn it can be heat treated, on order, to T-4 or T-6 hardness.

Example: Z48-48A-3.00-T6

## Determined weight of container

Thickness	lbs./sq. ft.
.020	= .29
.025	= .35
.030	= .43
.032	= .46
.040	= .58
.050	= .71
.063	= .89
.080	= 1.12
.090	= 1.28
.100	= 1.41

## Standard enclosure tolerances

Length, width and trim height:  
 Dimensions up to 6" ± .02"  
 6" to 24", ± .03"  
 over 24", ± .06"  
 Radius Tolerances ± .030

Closer tolerances, on trim heights can be provided on special order at additional cost.

Nutplate locations, vertical and horizontal, ± .03"

**NOTE:** Width and length are measured at point of tangency between bottom radius (R1) and side (R2). Draw marks, small scratches and minor scuffing is inherent in drawn boxes. For a scratch free finish on exterior of boxes, secondary operations must be specified.

## Bow Tolerances

Bowing, or "oil canning", may occur in the base or any side of a deep drawn box, particularly when multiple drawing operations are performed. The following tolerances for this bow condition are additive to basic dimensional tolerances:

Basic Size ②	Maximum Bow ①
Up to 6"	0.03"
Over 6" to 12"	0.06"
Over 12"	0.12"

**NOTE ①** – The bow condition will be checked by placing a straight edge across the tangent points of the corner radii of the side or bottom of the box, and measuring the maximum deviation from the straight edge to the surface of the metal. This applies to either a concave or convex condition.

**NOTE ②** – The basic size refers to the box width or length. The maximum allowable bow will be determined by the larger of the two dimensions for any given side, and by the smaller of the two dimensions for the bottom.

## Modified or custom deep drawn parts

Zero Manufacturing has a completely equipped design and manufacturing facility to perform any secondary operation or modification to standard boxes and covers. We also have an experienced staff of tool and die makers to satisfy your custom or special deep drawn requirements. Detailed information on this service is shown on pages 51-52 of this catalog, or contact Zero Manufacturing direct.

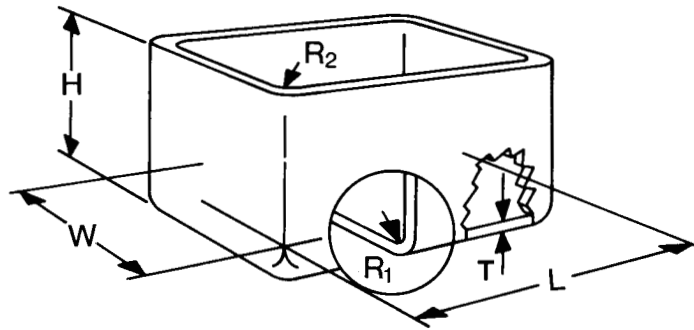

# RECTANGULAR BOXES

## Ordering information

**Zero Manufacturing's** deep-drawn rectangular boxes are available in any height between the maximum and minimum dimensions listed. When ordering, give the part number and height desired in inches.

**Remember** that Zero Manufacturing can save you time and money by fulfilling all your modification needs in-house. Eliminate extra vendors and let Zero finish the job for you.

**Key to drawing**

- W** Width measured at tangency between bottom radius (R1) and side
- L** Length measured at tangency between bottom radius (R1) and side
- H** Height
- T** Normal blank gauge thickness prior to drawing
- R1** Radius at bottom
- R2** Radius of side (on rectangular boxes and covers)

*Width (W), length (L) and height (H) are all outside dimensions and are measured at points of tangency. Thicknesses (T) shown are nominal blank thickness prior to drawing. Actual wall thickness is 75% or more of nominal blank thickness, but is dependent upon depth of draw, number of draws and net blank thickness (a variable within mill tolerances).*

**Part Number Example:**

Z48-48A-3.00	Z48-48A-3.00-AL30	Z48-48A-3.00-T6	Z48-48A-3.00-AA	Z48-48A-3.00-AA-T6
A 3.00" X 3.00" box trimmed to 3.00" made from 1100-0 alloy.	A 3.00" X 3.00" X 3.00" box, with a change in alloy to 3003-0. See page 6.	A 3.00" X 3.00" X 3.00" box, with a change in alloy to 6061-0 that has been heat treated and aged to T6 condition. See page 6.	A 3.00" X 3.00" X 3.00" box with nutplates installed in an 'AA' pattern. See page 49.	A 3.00" X 3.00" X 3.00" box with nutplates installed and an alloy change with heat treat.

Tangent: Straight edge meets the curve.

# ROUND HOUSINGS

## Ordering information

**Zero Manufacturing** offers two basic deep-drawn round housing configurations: Standard and Special. They are available in any height up to the maximum height listed. When ordering, give the part number and height desired in inches.

**Remember** that Zero Manufacturing can save you time and money by fulfilling all your modification needs in-house. Eliminate extra vendors and let Zero finish the job for you.

**STANDARD VERSION (Figure 1)**  
The Standard Version round housing is drawn with a uniform bottom radius (R1).

**SPECIAL VERSION (Figure 2)**  
The Special Version round housings, available only through special order, feature an angle-beveled base instead of a uniform radius. The tables on the following pages show this under the R1 column as a combination of the angle of the bevel (dimension A) and the inset of the base from the outside vertical wall (dimension X). This is shown, for example, as 30. x 0.31.

- Key to drawing**
- OD** Outside diameter measured at tangency between bottom radius (R1) and side
  - H** Outside height
  - T** Gauge thickness
  - A** Angle of the bevel (Special Version only)
  - X** Inset of the base from the outside vertical wall (Special Version only)

Part Number Example:		
ZR35A-2.00	ZR35A-2.00-AL60	ZR35A-2.00-T4
A 2.20" diameter X 2.00" round housing made from 1100-0 alloy.	A 2.20" diameter X 2.00" round housing with a change in alloy to 6061-0.	A 2.20" diameter X 2.00" round housing with a change in alloy to 6061-0 that has been heat treated to T4 condition.

6.094 diameter; .625 height, .125 radius; part number ZR-96-COG.

# COVERS

## Ordering information

Zero Manufacturing's case covers are available in five basic configurations.

**Remember** that Zero Manufacturing can save you time and money by fulfilling all your modification needs in-house. Eliminate extra vendors and let Zero finish the job for you.

REF ZSP5-511 OR  
ZSP5-510 (.063)

NOTE: MATING GASKETS SUPPLIED ON SPECIAL ORDER ONLY.

### Flush-fitting covers (CF)

Flush-fitting covers are available for all boxes listed in this catalog. They can be made to any height increment between the maximum and minimum listed.

### Outside-fitting covers (COT, COL)

Zero offers both tight-fitting (COT) and loose-fitting (COL) covers, with no variation of clearance for a gasket. Height variations are available with special setup or tooling, for which charges may apply.

### Inside-fitting covers (CI)

Zero offers tight fitting inside covers, though no height variation is available without special tooling.

NOTE: GASKET CONFIGURATION IS ZERO'S OPTION.

### Gasket-fitting covers (COG)

Gasket-fitting covers allow clearance for a gasket. No height variation is available without special tooling, and gaskets are not included. You may purchase the gaskets from Zero through special order.

### Part Number Example:

ZT28-160-COT-.37	ZT28-160-COT-.37-BB
A 1.75" X 10.02" X .37" tight fitting cover made from 3003H14 alloy.	A 1.75" X 10.02" X .37" tight fitting cover with screws and washers installed in a 'BB' pattern. See page 49.

# COVERS

Part Number ZT15-52-COT to Z32-83-CI

See page 38 for clarification of dimensions

Note: Flush fitting covers (CF) are available for any boxes listed in this catalog.

# NUTPLATES

## Ordering information

Zero Manufacturing offers three standard nutplate pattern configurations:

- A box equipped with nutplates and attaching hardware
- A cover equipped with nutplate screw and washer assemblies
- Moisture resistant assemblies (nutplates spaced no more than 4" apart, center-to-center)

For your convenience, we have established a recommended nutplate pattern for every outside-fitting cover. However, if you need to build to custom specifications, you may refer to Table 1 to review size requirements for each nutplate pattern. Please note that flush-fitting and inside-fitting covers may not be utilized as nutplate covers, and tight-fitting covers must be no higher than -.5 or .31" for use with a nutplate.

Table 1

**CAUTION:** Nutplate patterns are restricted to minimum sizes due to space on basic enclosures as follows:

**Pattern AA**

Recommended for boxes under 1.62" wide

**Pattern BB**

Not recommended for boxes under 1.75" x 2.87"

**Pattern CC**

Not recommended for boxes under 2.00" x 2.50"

**Pattern DD**

Not recommended for boxes under 1.44" x 2.44"

**Pattern EE**

Not recommended for boxes under 1.75" x 2.87"

**Pattern FF**

Not recommended for boxes under 2.00" x 3.00"

**Pattern GG**

Not recommended for boxes under 1.75" x 3.75"

**Pattern HH**

Not recommended for boxes under 2.12" x 3.00"

**Pattern JJ**

Not recommended for boxes under 2.00" x 4.00"

**When ordering any enclosure,** add the required nutplate pattern as a special order. Be sure to specify the same nutplate pattern for both the enclosure and the cover.

**Remember** that Zero Manufacturing can save you time and money by fulfilling all your modification needs in-house. Eliminate extra vendors and let Zero finish the job for you.

NOTE: CF and CI covers may not be utilized as nutplate covers.

COG and COL may be used for gasketed covers.

# STANDARD NUTPLATE PATTERNS

(Custom Nutplate Patterns available as special order item.)

**NOTE:** All nutplates are located on center lines or located .25" from radii points of tangency with the exception of pattern HH and JJ. The typical location of HH and JJ is as shown in pattern HH.

**CAUTION:** On all boxes under 1.62" width use pattern AA only.

**STANDARD ENCLOSURE & COVER ASSEMBLY**

COVER SCREW ZSP10-1003

**OPTIONAL ENCLOSURE & COVER ASSEMBLY**

NOTE: This is a custom application.

Note: We do not sell tooling to install nutplates. ZERO will install them. Covers are tapped.

# CUSTOM WORK AND MODIFICATIONS

## Custom Modifications

Custom cases are not only practical, but are often critical for the protection and performance of the equipment they contain. Zero specializes in creative solutions for custom needs. We use thirteen state-of-the-art networked CAD-based design systems that enable our engineers to develop intelligent and truly functional custom solutions that meet and exceed the most stringent specifications, including all military specs. Our extensive field experience and in-house mechanical test capabilities make us the indisputable leader in case design.

## Trumpf TLC 1005 Laser

The Trumpf TLC 1005 Laser is a Zero Manufacturing exclusive. This computer controlled, five-axis laser marks a new era in the world of protective enclosures. It grants Zero unparalleled flexibility, speed and efficiency when custom cutting and fabricating aluminum and other metals. The laser allows us to bypass the entire tooling process, eliminating costly setup and tooling fees. It is the ideal tool for quick prototype turn-around and for fulfilling shorter runs.

## Considerations

- Not all aluminum alloys are readily deep drawn, even in the annealed condition. The rate at which an alloy hardens governs the relative depth that can be economically drawn (1100-0, 3000-0, and 6061-0 are good alloys for this purpose). If extra strength is required, Zero Manufacturing can heat treat 6061-0 to a T-4 or T-6 condition in conjunction with the drawing process.
- Many materials, other than aluminum, can be deep drawn. Zero has the ability to draw most materials on special order.
- Sidewall thickness will reduce up to 25% in the case of a relatively severe draw.
- The drawn depth of a box should not be expected to exceed the smallest sectional dimension in one

draw. For a box depth greater than the width or diameter, multiple draw operations are required.

- Inside corner radii should be a minimum of four to five times the material thickness. With multiple draws, the radii may be reduced by one thickness per draw operation.
- The deep draw process does not require any draft, such as in a casting. In fact, cones or tapered boxes are the most difficult shapes to draw.

## Remember

Zero Manufacturing can save you time and money by fulfilling all your modification needs in-house. Eliminate extra vendors and let Zero finish the job for you.

# CUSTOM WORK AND MODIFICATIONS

## Modifications

Zero Manufacturing is a one-stop shop. Not only do we offer the standard or custom cases that you need, we also modify them according to aesthetic or functional specifications. Our complete in-house services eliminate your need for a broad vendor base and free up time and money otherwise dedicated to managing varied service providers.

Start with a Zero Manufacturing deep-drawn box and go from there. After more than four decades of technological design experience and product innovation, Zero has produced literally millions of specially modified enclosures for customers in every type of industry. Many of these were developed from standard boxes.

Following is a summary of the modification services that Zero offers:

## Alterations

- Piercing
- Welding
- Louvers
- Ramping
- Tapping
- Trimming

## Assembly

- Install rivets, screws and washers
- Mount hardware
- Assemble nutplates
- Standard and custom foam inserts

## Accessories

- Blowers
- Brackets
- Card edges
- Covers
- Flanges
- Panels
- Nutplates
- Fans
- Feet
- Gaskets
- Handles
- Hinges

- Labels
- Latches
- Nameplates
- Standard and custom foam inserts

## Finish

- Paint coat
- Powder coat
- Anodize
- Chemical film
- Heat-treatment

## Marking

- Silk-screen
- Stencil
- Etch & fill
- Label
- Bar code
- Emboss
- Hot stamp

## Testing

- Watertight integrity
- Pull test
- Drop test
- Die penetrant
- First article report

### OPTIONAL FEATURE Mounting box or cover to flat surface (front or back) typical examples

# PRECISION MINIATURE ENCLOSURES

**Zero Manufacturing** offers precision miniature enclosures in aluminum and cold-rolled steel.

Zero can modify each miniature enclosure in-house so that the product we provide is the perfect product to suit your needs. We offer a complete range of alteration, assembly, accessorizing, finish, marking and testing services. Please refer to the Modifications section in this catalog 52 for more details.

# GENERAL INFORMATION

In order to maintain our consistently high level of quality and precision workmanship, our quality control procedures have been designed to comply with the inspection standards of Military Specifications MIL-I-45208.

## Tolerances

Standard tolerances are  $\pm 0.010$ " unless otherwise specified.

## Plating/Finishing

All plating processes are available.

## Heat Treating

Standard heat treating at Zero Manufacturing is Fast and Slow Cycle Hydrogen Annealing.

## Tooling Capabilities

At Zero Manufacturing, a complete tool and die facility is at your disposal. Our standard line of enclosures is increasing every day. If you have a requirement not listed in our catalog, please feel free to contact us. If it can be made, we can make it for you.

## Delivery

Please call.

## Shipping

All parts are shipped in convenient cardboard cartons. All plated and annealed parts are individually packaged to prevent damage in shipping. However, on request, we can package to suit any requirement you may have.

## HOW TO ORDER

### Ordering Enclosures

In order to assure that you receive the correct part and to avoid delay in deliveries caused by misunderstanding, the steps outlined below should be followed when placing an order for parts:

1. Specify the Part Number, see Page 55 for Square ZMS Series, pages 56-58 for Rectangular ZMR Series, and page 59 for Circular ZMC Series.

2. To the Part Number, add the Depth of the part. Maximum Depth is found in column 3 for ZMS and ZMR Series parts and in column 2 for ZMC Series parts. Note: All parts listed are of maximum depth. With your exact specification, Zero Manufacturing will trim them to the desired depth.

3. Then, at the end of the part number, specify the type of material from which the part is to be manufactured by adding a material code as follows:

ST - Cold Rolled Steel

AL - Aluminum

4. When you have completed a Part Number, the number should appear as follows:

**ZMC-075-1.000-ST**      Circular: 0.750" dia. 1.000" depth of Cold Rolled Steel

**ZMS-150-1.750-BR**      Square: 1.500" sq. 1.750" depth of Brass

**ZMR-210-243-.875-AL-T6**      Rectangular: 2.109" wide 2.438" long x 0.875" depth of aluminum 6061-O heat treated to 6061-T6

### Ordering Mating Covers

To order a mating cover for use with any enclosure listed in this catalog use the following procedure:

1. Specify the Part Number, and
2. To the Part Number add the code IS (for Inside Cover) or OS (for Outside Cover). See the "Covers Available" column on pages 55 through 59 for availability.

Example: ZMR-022-151-IS-AL is an aluminum rectangular inside cover measuring 0.218"W x 1.515"L.

## MATERIAL DETAILS

**Thickness:** The thickness at which a part may be made from each of these materials may be determined by consulting the Material Code chart shown at the top of each page.

**Aluminum Alloy and Heat Treat:** If aluminum is chosen, it will be 1100-0, 3003-0, or 6061-0 as chosen by Zero. If heat treat is desired, add -T4 or -T6 to the end of the part number and 6061-0 will be used and then heat treated to 6061-T4 or 6061-T6 respectively.

**Alternative Materials:** Most parts of the Precision Miniature Enclosures may also be manufactured by these materials: Nickel/Silver, Cupro Nickel, and Copper Dead Soft. However actual use is dependent upon the part requested. For additional information, please contact ZERO directly.

# Flanged Housings

## Rectangular and Square Sizes

Look to Zero Manufacturing when an application calls for a standard aluminum rectangular or square housing with a flange.

With numerous sizes to choose from, you need only to select a part number and a final part height.

**Height:**  
Choose between minimum and maximum heights listed with dimension information.

When ordering give part number and height desired in inches.

Example:  
HF0300506-1.00 =  
A rectangular flanged housing 3.00" W x 5.00" L x 1.00" H.

# Flanged Housings Round Sizes

Flanged round housings are also a Zero Manufacturing specialty.

When ordering give part number and height desired in inches.

**Height:**

Choose between minimum and maximum heights listed with dimension information.

Example:

HF046063-4.00 =  
A round flanged housing  
4.60" D x 4.00" H.

OUTSIDE DIAMETER INCHES	OUTSIDE HEIGHT H INCHES		BLANK GAUGE T INCHES	ALLOY	CORNER RADII BOTTOM SIDE R1 Inside R2 Outside		FLANGE WIDTH INCHES	PART NUMBER (Non-Stock) Specify Trim Height

## Glossary of Terms

- Alloy:** An aluminum alloy is a metal that is a mixture of aluminum and one or more other elements.  
**1100:** 99% pure aluminum.  
**3003:** Aluminum/manganese alloy.  
**6061:** Aluminum/manganese/silicon alloy.
- Anodizing:** Electrochemically converting the surface of aluminum from metallic aluminum to aluminum oxide (alumina) by making aluminum the anode in a plating-type electrochemical cell. It is used not only for added protection, but also in conjunction with dyeing and sealing to create decorative effects. MIL-A-8625 Type 2, Class A or B.
- Artificial Aging:** Speeding up the natural aging cycle by heating the metal for a short time.
- CF:** Flush fitting cover.
- CI:** Inside fitting cover.
- COG:** Outside fitting cover with gasket clearance.
- COL:** Outside fitting cover with loose fit.
- COT:** Outside fitting cover with tight fit.
- Cold Working:** Applying a mechanical force (such as deep drawing) to metal at room temperature at such a rate that strain-hardening occurs.
- Deep Drawing:** Using a ram to force an aluminum sheet into a draw die to produce a shell. See also draw die. Deep drawing is also used to produce many cup-shaped products in other industries.
- Die:** See draw die.
- Draw Die:** Tooling used in the deep drawing process to produce shells.
- EMI Gasket:** A gasket used in closures and on panel flanges to keep EMI radiation from entering or escaping from an enclosure.
- EMI Shielding:** Shielding against radiated or conducted EMI/RFI.
- Flange:** A rim into which a panel can be mounted.
- Hardening:** Increasing the hardness of metal by suitable treatment such as by strain or heat. Associated with processes such as age hardening, strain or work hardening, precipitation hardening, or quench hardening.
- Heat Treat:** Temper produced by heating.
- Heat-Treatable Alloy:** An aluminum alloy that can be hardened by heat treatment. Generally includes the 6061 alloy.
- Height:** The depth of a shell.
- Mu-metal:** A metal with high nickel content (78% nickel, iron, plus other additions) providing high magnetic permeability. Mu-metal shells are used as enclosures or covers for shielding/magnetically isolating critical parts from magnetic interference. Mu-metal 'absorbs' magnetic lines in the vicinity rather than allowing them to pass through critical components.
- Nutplate:** A nut capable of receiving a screw for mounting a panel, etc.
- O.D.:** Outside diameter measured at tangency between bottom radius (R1) and side.
- Points of Tangency:** The points at which the straight portions of the shell walls intersect the beginning of the radius corners.
- Precipitation Hardening:** A metal-treating process that increases the strength of aluminum by precipitation alloying material into the structure of aluminum. Natural aging is involved if the process occurs at room temperature, while artificial aging involves the application of heat.
- Quenching:** The quick chilling of aluminum to retain, at room temperature, the metallurgical structure produced by heat treatment at an elevated temperature.
- R1:** The radius at the bottom of drawn shells.
- R2:** The radius at the sides of drawn shells.

**Reflectivity:** The ability of a surface to mirror or reflect radiant energy. The reflectance of aluminum is exceptionally high.

**RFI:** Radio frequency interference.

**Seamless Construction:** An exceptional attribute of deep drawn shells. Deep drawn shells have no seam.

**Secondary Aluminum:** Metal recovered aluminum scrap, segregated by alloy, and resmelted to produce purified metal. One of its more important uses is in the foundry industry. A great advantage of aluminum is that it can be recycled indefinitely, as a secondary product. This not only preserves aluminum as a natural resource, but it also saves energy, since secondary aluminum is less costly to produce.

**Solution Heat Treating:** A strengthening thermal treatment in which certain aluminum alloys are heated to a relatively high temperature and then held (soaked) for varying times. A rapid quench or natural aging follows the heating period.

**Strength-to-Weight Ratio:** The ratio of tensile strength to the weight of a material.

**T:** Material thickness.

**Tangency:** See points of tangency.

**Temper Code:** A letter-number code which designates heat treatment and cold work processes to create a temper.

**Tensile Strength:** The maximum pulling load that a material can sustain without failure.

**Work Hardening:** Hardening which occurs as the result of deforming metal crystals. Results from deep drawing and other cold forming processes, including bending.

**ZERO Method:** The technologies and craft of Zero Manufacturing's deep drawn products.
